

Dear FCC,
Please allow XM Radio to provide local traffic and weather information.
If the government would stop regulating the communication industry it
would thrive like the computer industry. Can you imagine how bad our computer
industry would be if the FCC or some other agency of the government had the
right to regulate it. You have gotten in the way
of one of our most important industries for too long, stop the political
foolishness and let the industry freely compete.\

Regards,

Jacob Grainger
